Introduction Introduce the topic area Give the outline of the essay		Importance of evidence-based medicine in providing high-quality patient care <i>In this essay, I will outline the issues related to introducing evidence-based medicine in a clinical setting.</i> <i>I will illustrate/describe ... (examples)</i> <i>I will consider ... (solutions)</i> <i>Finally, I will suggest ... (best solution)</i>
Body	Paragraph 1 Situation/problems (general)	Difficulties in introducing evidence-based guidelines into clinical practice: 1. providing timely, high-quality evidence on best practice in relation to treatments 2. ensuring evidence-based clinical guidelines are accepted by clinical staff 3. providing access to evidence at the point of decision-making
	Paragraph 2 Problems (specific examples)	Systematic reviews very time consuming: only 5,000 by 2007 University Hospital Swendon, only 30% of staff following guidelines
	Paragraph 3 Solutions	Use of clinical evidence to provide up to date information on research implications two possibilities: 1. giving clinical staff responsibility for creating guidelines 2. implementing guidelines agreed by small group of representatives and ensuring wider involvement in subsequent amending by staff 3. integration of evidence into computerized patient support systems
	Paragraph 4 Evaluations of solutions	Evidence suggests clinicians will use guidelines where they have been involved in drawing them up. However, this can be time-consuming and complicated. Integration into computerized support systems is useful, but systems take time to be introduced.
Conclusion		<i>From the evidence, we can suggest/conclude ...</i> <i>Firstly ...</i> <i>Secondly ...</i> <i>Thirdly ...</i>
